BUSINESS SUMMARY

Evolutionary Healer (EH) has discovered the driver for repetitive behaviors. This process is known as Repetitive Behavior Cellular Regression™ (CR) and has proven effective in dealing with behaviors anywhere from procrastination or self-sabotage to Complex PTSD, MST (Military Sexual Trauma), Suicide Ideation and alcohol abuse.

EH Chairman, Terry Earthwind Nichols is the creator and a co-developer of the CR Process. We are currently focusing on complimentary approaches to symptom management for Military and Veteran populations as well as their families.

CORE COMPETENCIES

Repetitive Behavior Cellular Regression™ (CR) is a non-linear, Q & A sequencing model for decreasing repetitive behaviors in humans. Using only the five senses to describe a memory, we look for missing or odd information getting us to the unknown core memory, housing an amnesic memory that drives the client's repetitive behavior. This is done without the use of any outside influences such as hypnosis or pharmaceuticals and no office visits.

PERFORMANCE

To date we have successfully conducted 170+ CR Sessions on 5 continents and in 12 countries including the following 25 US States: AK, AZ, CA, CT, FL, ID, IL, MA, MD, MI, MN, MO, MT, NC, NJ, NM, NV, NY, OH, OR, PA, RI, SC, TX, VA.

CLIENT DEMOGRAPHICS

Gender: Male and female
Age Range: 16 to 77
Education: Non-high school graduate to multiple PhD's
Veterans (combat and non-combat) and Civilians
Economic: below poverty line to professional income

DIFFERENTIATORS

Repetitive Behavior Cellular Regression™ (CR) was created by Terry Earthwind Nichols in the fall of 2010. This model is a non-medical, sequence-based, Question and Answer process used without any outside stimuli such as hypnosis, mood altering substances or pharmaceuticals and can be conducted over the internet using audio visual communication. Traditional psycho-therapeutic modalities use the person's story and emotions therapeutically. The innovation is that CR keeps the client out of story as well as emotion and uses alternate neural pathways as a way to find an amnesic memory that drives repetitive behaviors.
